

Reification

Conjunction via reification

$$(c_1 \iff b_1 = 1) \wedge b_1 \in \{0, 1\} \quad (c_2 \iff b_2 = 1) \wedge b_2 \in \{0, 1\}$$

$c_1 \wedge c_2$ can be expressed with conjunction as follows:

$$b_1 + b_2 = 2$$

k reified constraints

$$(c_i \iff b_i = 1) \wedge b_i \in \{0, 1\} \quad \forall i \in \{0, \dots, n-1\}$$

Constraint expressing that $1 \leq k \leq n$ constraints hold:

$$\text{sum}(\{b_0, \dots, b_{n-1}\}) \geq 1$$
